GREAT for SKILLS LABS, SURGICAL TRAINING, & PRODUCT DEMOS

The Next Generation of Surgeon Point-of-View Video

Booth: 926

Capturing professional quality video from a surgeon's perspective has always been challenging. Current systems still rely on USB cameras that require the surgeon to bring a laptop to the OR and be tethered to the computer. Adjusting focus and centering the image can be difficult and the length and quality of video captured can be affected by video compression and memory.

With the explosion of video use in patient engagement, surgical training, and residency education - it was clear that surgeon point-of-view video (POV) had to evolve.

Introducing the **S.W.I.S. Surgical Video System**. Using the latest in video technology, it takes surgeon pov video to the next level. In addition to the features listed above, it also comes with a wearable HD display allowing you to frame your shot. Now you will never have to ask your viewers: Do you **S**ee **W**hat **I S**ee - duing a case. With the S.W.I.S. System - now they truly can!

The Ultimate GoPro® Surgical Head mount

The unique design of the S.W.I.S. Surgical GoPro Head Gear enables the camera lens to be centered between your eyes, and adjusted to any angle no matter where you look! Padded for comfort and easily adjustable there is no better way to head mount your GoPro for use in the OR, Skills or Anatomy Lab.

Plug the included Hero Port usb power cable into the Hero port of your Hero4 (Black/Silver) camera and use a USB battery pack to run your camera all day long.

Connect the included micro HDMI to HDMI cable to one of our optional HDMI transmitters or HDMI extension cables to allow students and residents to "see" what you see on an external monitor or TV.

With an optional camera modification, a 1.5x, 2x, 3x, or 4x lens can be used to capture the finest details in any case.
